- Highly skilled to translate business requirements or functional requirements into functional specifications.
- Firm understanding of the Software Development Life Cycle (SDLC).
- Deliver requirements under the Agile Scrum SDLC methodology to meet a very fast release schedule.
- Worked on various applications and Conducted Gap Analysis between “As is” and “To be” process for the applications. Participated in the Logical and Physical Design sessions and developed Design Documents.
- Created role based matrix for these applications and worked with the developer to create applications supporting these roles.
- Excellent knowledge of mortgage life cycle and worked on mortgage loan origination fee generation system
- Utilized Rational Unified Process (RUP) to configure and develop processes, standards, and procedure.

- Conducting UAT (User Acceptance Testing) using HP Application Lifecycle Management tool.
- Performed UAT to make sure that all requirements were catered for in the application
- Conducted Functional Walkthroughs, User Acceptance Testing (UAT) sessions, and assisted the development of User Manuals for customers.
- Troubleshooting and resolving application issues; identifying ways to improve existing processes via writing SQL, Java and HTML code.
- Performed Gap analysis by identifying existing technologies, documenting the enhancements to meet the end state requirements.
- Analyzed and documented Business requirements and detail design of the software for full understanding of the business.
- Accumulated student's requirements from various end through surveys, interviews and JAD sessions, stake holders and translated them into system requirements.
- Defined the change management approval procedures to control the scope of the order management requirements.
- Actively engaged various partners from the client team to monitor and control the risk associated with changing scope.
- Identified the business risks associated with the new system and formulated a Mitigation Plan to reduce the effect of critical risk factors.
- Created Business requirements, functional requirements and Use case diagrams.

Thompson Reuters, Mclean, VA

Nov 2010 – Jan 2011

Business Analyst

Omgeo Connect, a complementary offering to Omgeo's existing solutions, Omgeo Connect provides a single point of access for investment managers and investment manager outsourcers to interact with Omgeo services and other best-of-breed post-trade solutions, enabling the trade and settlement management of multiple asset classes via an ASP environment. Omgeo Connect will be most valuable for investment managers with large, multiple asset class trading volumes and complex environments, as well as investment manager outsourcers looking to consolidate multiple investment manager operations onto a single platform. Omgeo Connect enables clients to reduce operating costs and risks quickly without high up-front costs and unpredictable ongoing expenditures associated with custom-developed environments and various vendor-system upgrades.

Responsibilities:

- Worked as a team player and as a business analyst on Omgeo Connect, Oasys, INSITE and P&O Projects, cross functional tasks from clarifying functional specifications through implementation, for product development efforts. Work in partnership with Cross Functional team business analysts, product managers, and software developers, both within the company and sometimes with offsite partners for UAT.
- Working on post trade confirmation, pre-settlement and trade communication products; "CTM, OASYS, Trade Suite and BBH messaging".
- Gathered and documented User Requirements for proprietary Global and Domestic trading systems Coordinated product reviews of Requirement documents, incorporated agreed changes and obtained global sign off on final versions from Project Management and CFT.
- Documented existing processes and assisted in identifying areas of improvement for Operating Model in Pre-Trade and Post trade settlement process.
- Created and executed test scripts for existing defects, system enhancements and new system functionality.
- Utilized Rational Unified Process (RUP) to configure and develop processes, standards, and procedure.
- Implemented functionality for Omgeo Connect, a single point of entry for multiple Omgeo services, such as Omgeo Central Trade Manager (CTM), Omgeo OASYS, and Omgeo Trade Suite ID.
- Reviewed System and Functional Design documents to ensure adherence to specified business requirements.
- Researched current techniques, systems and processes in place to determine changes to reduce costs, enhance efficiency and meet business needs.

- Assisted in User Acceptance Testing (UAT), developing and maintaining quality procedures, and ensuring that appropriate documentation is in place.
- Interacted with third party vendor during all product development lifecycles (including system design, testing, defect review and implementation).
- Investigated system defects generated by Omgeo Connect trading system while interacting with End Clients.
- Created system “workarounds” for end-users upon discovery of defects.
- Served a leading role in internal agile transformation and in presenting the company's agile transformation to customers. Worked in implementation of QA methodologies like Waterfall, Agile, CMMI and SCRUM.
- Worked with the Technical Support Manager to ensure that all Support QA tasks have resources assigned and the workloads are level.
- Identifying the Security Risks in the application that being built and address them in the requirement document to avoid the security breaches.
- Worked with subject matter experts including architects, software engineers, and QA professionals to gather detailed information about the product being built.

Netsoft Microsystems, India

April 2009 – Oct 2010

Business Systems Analyst

Netsoft Microsystems specializes in Offshore and Inshore Development of Software, and offers to engage in a long-term partnership with the clients. Applicant Tracking System (APS) application is designed to help companies in streamlining their recruitment process. It can be used for post job openings, screen resumes, generate and send interview requests to potential candidates by email. It also has a gamut of other features like individual applicant tracking; pre-screening questions, response tracking, automated resume ranking etc. and a wide variety of reports can be generated to perform recruitment data analysis.

Responsibilities:

- Coordinated all aspects of projects such as initiation, planning, scheduling, task assignment and tracking, status reporting and risk management.
- Facilitated JAD sessions to coordinate activities for project schedules, presented deliverables to the management, conducted JAD sessions to elicit requirements.
- Identified processes for developing and documenting detailed business requirements including process, data flow analysis and modeling.
- Created Use-Cases, BPM, and Requirement documents to document the Business needs.
- Requirements were gathered through interactions and meetings and periodic walkthroughs with loan analysts, credit analysts and other potential users of the application.
- Conducted Use-Case reviews and identified Gaps, leading to improvements/enhancements in the same.
- Managed requirements to minimize scope issues. Understood all system requirements and provided feedback, collected requirements from stakeholders and prioritized them.
- Worked with the Project Manager on various Project Management activities such as keeping track of the Project Status, Deadlines, Environment Request, and Compliance Issues.
- Prepared Business Process Models including modeling of all the activities of the business from the conceptual to procedural level.
- Responsible for building training materials to train team members with Business process.
- Tracked issues that were detected and updated the status of existing issues based on the daily meetings with the offshore team.
- Worked closely with Project manager/Senior Analysts in handling the whole project.
- Followed the Agile methodology during the entire SDLC.
